**Office Action Summary**

Application No.

09/780,360

Applicant(s)

KIM ET AL.

Examiner

Cynthia Britt

Art Unit

2133

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 06 January 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-26 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-26 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 06 October 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

Claims 1-26 are presented for examination.

### ***Response to Arguments***

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., ...*a pair of such data blocks are rearranged and then combined to produce one data block as shown in Figure 5. Particularly, prior to the combining step, for each of the data block  $U(i,j)$  and  $V(i,j)$  in Figure 4, the rows having the outer parity are selectively inserted into the rows having no outer parities. Then these two data blocks  $U(i,j)$  and  $V(i,j)$  are combined into one as shown in Figure 5. Then the rows of such combined data block are sequentially recorded onto a data storage medium. This in effect means that the first row of the first data block  $U(i,j)$  and the first row of the second data block  $V(i,j)$  are sequentially recorded on the medium. Then the second row of the first data block  $U(i,j)$  and the second row of the second data block  $V(i,j)$  are sequentially recorded on the medium. Then the third rows of the first and second data blocks are sequentially recorded on the medium. This process is repeated for the rest of the rows of the first and second data blocks. Pages 16 and 17) are not recited clearly in the rejected claim(s). As such, the 35 USC 112 rejections are maintained, and the examiner would like to also note that these issues are also present in the newly added independent claims. Although the claims are interpreted in light of the specification, limitations from*

the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claims 1, 8, 14, and 21, the phrase "...forming one ECC block to perform an error correction on the ECC block" is unclear. The examiner would like to point out that most if not all of the prior art presented teach the use of inner and outer parity in a matrix form, interleaved and stored on a storage medium. The addition of the phrase mentioned above does not seem to add any function, as the block of data appears to be in the standard format (as disclosed in the background portion of this application and also in Nakane et al. U.S. Patent No. 6,621,782 column 2 lines 1-8) and **in general error correction is preformed on the data based on an error correction code not based on a block**. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). It is unclear to the examiner based on the wording of these claims that there would be any difference in the way the ECC

process would function in this claim or the prior arts of record. Pages 5-7 of the current specification appear to contain the core of this disclosure, specifically the matter contained in Figure 5.

As per claims 2-7, 9-13 15-20, and 22-26 these claims are dependent on the rejected independent claims and inherit the 35 U.S.C. 112, second paragraph issues of the independent claims and will not be further considered on the individual merits of each claim.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 8-10, 14-15, and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Zook U.S. Patent No. 6,052,815.

As per claims 1, 2, 8-10, 14-15, and 21, Zook teaches using product codes (inner and outer parity) to form a matrix (data block) of data to be interleaved and stored in a storage medium. Using an error correction system for computer storage devices that avoids the latency associated with verifying the validity and completeness of corrections to a multi-dimensional code. The validation is carried out using a cyclic redundancy check (CRC). During a write operation, it CRC redundancy symbols are computed over user data received from a host system, and after appending the CRC symbols, the data is randomized by XORing it with a pseudo random data pattern. ECC symbols are then generated over the randomized data to form row (Q) and column (P) codewords of a product code; the product code is then written to the disk. Upon readback, the product code is stored in a data buffer for decoding by a P/Q decoder. During a first pass over the Q codewords, a data CRC syndrome is generated over the uncorrected randomized data; the data CRC syndrome is stored in a data CRC register. Also during the first pass and subsequent passes, when corrections are made to the P or Q codewords the correction values are applied to an error CRC register. After processing a complete CRC codeword, the data CRC and error CRC registers are combined to generate a final CRC syndrome. The final CRC syndrome is compared to a constant to determine if the corrections to the product code are valid and complete, where the constant equals the CRC over the random data pattern. In this manner, the CRC check can be performed over the randomized data, thereby avoiding the latency associated with accessing the

Art Unit: 2133

data buffer to derandomize the data before generating the CRC syndrome. (Figures 3A, 3B, and figure 11, column 5 line 23 through column 6 line 14, column 8 lines 22-51)

The examiner would also like to point out that claims 3, 4, 7, 11, 12 and 19 are claiming only what was admitted prior art in the background of the current invention. See pages 1 and 2 of the current specification.

### ***Conclusion***

The examiner would like to point out that an interview to discuss the claim language would likely be beneficial to the prosecution of this case. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cynthia Britt whose telephone number is 571-272-3815. The examiner can normally be reached on Monday - Thursday 7am – 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert Decady can be reached on 571-272-3819. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
